EXPERIENCE

Aristocrat Interactive, Tel Aviv — NOC Team Leader (Production Operations & IT Support) (Oct 2025 - Present)

- Built an incident email/Jira ticket generator, saving team time and reducing communication errors.
- Developed a production health dashboard for a consolidated view of all production systems, deployed through AWS CloudFront.
- Automated NOC daily and repetitive tasks with Bash/Python/PowerShell and standardized Confluence runbooks.
- Promoted within 8 months to lead 24/7 monitoring, incident triage, and cross-team escalations.
- Investigated incidents using logs/metrics and managed stakeholder updates through resolution.

Aristocrat Interactive, Tel Aviv — NOC/SOC Engineer (Mar 2025 - Oct 2025)

- Monitored regulated lottery platforms using Datadog, Coralogix, and Logz.io; investigated alerts and escalated with supporting evidence.
- Supported patching and releases through post-deployment checks and documented issues for remediation.
- Triaged security alerts and provided incident context for escalation to security teams.

PROJECTS

SafeRide - V2V Collision Avoidance with Edge AI **(ESP32,ESP-NOW,SUMO,Docker,TFLite,Python,C/C++,AWS,pytest)**

- Built a 3-vehicle ESP32 V2V network with multi-hop ESP-NOW mesh relay, fusing IMU, magnetometer and GPS data and logging it to microSD
- Trained a PPO reinforcement-learning braking agent (Deep Sets, variable peer count) in Dockerized SUMO on AWS EC2/S3. It reached 84% hazard detection at 11% false positives on real convoy data, later deployed on ESP32 as an INT8 TFLite model.
- Built a Python ESP-NOW emulator calibrated on real convoy recordings (latency, packet loss, GPS noise) to close the sim-to-real gap.
- Applied test-driven development (TDD) across firmware and the ML pipeline, writing 230+ unit and integration tests

Adam - Self Hosted Agentic AI Assistant **- (Python FastAPI,SQLite,Docker,GitHub Actions,Local LLM, Claude Code, Codex)**

- Designed a multi-agent architecture in which a local LLM parses user intent and routes tasks, delegating complex reasoning and coding to Claude Code andOpenAI Codex as tools
- Built an agent tool-calling framework with policy enforcement, human-in-the-loop approval for risky actions, idempotent execution and audit logging
- Implemented RAG-based long-term memory, keyword-based voice activation, and 300+ automated CI tests.

EDUCATION + CERTIFICATIONS

Shenkar Design & Engineering, Ramat Gan — B.Sc. Software Engineering (Feb 2022 - Sep 2026)

Docker Foundations Professional Certificate (Dec 2025)
